

Appendix 1

What you need:

- plasticine
- piece of cardboard to work the plasticine
- piece of dental floss, around 60 centimeters long
- ruler
- white paper
- long pencil
- 2 toothpicks

1. Put the lump of plasticine on the cardboard and shape a mountain about 4 centimeters high. The mountain should be flat on the bottom.

2. Use the long pencil to poke two holes straight down through the center of the mountain. Make sure your two holes go all the way through the mountain.

3. Make three marks to divide your mountain into four slices all about the same thickness.

4. Remove the top patch of plasticine slice and place it on the paper. Use the pencil to carefully trace around it. Push the pencil through one of the holes in the clay and make a dot on the paper; do the same with the other hole. Put the slice aside, but don't squash it. You'll need it again later.

5. Cut the second patch from the top and put it on the paper you previously traced the first patch. Place two toothpicks through the holes and align them with two dots on the paper. Draw the patch and carefully move it. The trace should go beyond the graph of the first patch.

6. Cut another slice at the next mark down and proceeding as before.

7. Stack the slices back up in order on the cardboard. Be sure the holes line up.
